

What types of electrical distribution boxes are there for suspended platforms

AI Overview

Suspended platforms use several types of electrical control boxes, including standard factory models, modular intelligent boxes, and high-performance customized panels, each designed for safety, durability, and efficient power distribution.

Standard Factory Model Control Boxes

These are the most common type used in ZLP series suspended platforms (ZLP250, ZLP500, ZLP630, ZLP800, ZLP1000). They feature:

- Motor power compatibility ranging from 1.5 kW to 2×2.2 kW
 - Electrical components from brands like CHINT and SCHNEIDER
 - Safety features including overload protection, emergency stop, phase loss protection, and limit switch compatibility
 - Construction using cold-galvanized steel for durability
 - Power supply options for 220V, 380V, or 415V, supporting single-phase or three-phase systems
- These boxes ensure stable power distribution and smooth lifting operations for curtain wall construction, window cleaning, and other high-altitude tasks .

Modular Intelligent Control Boxes

Module-type boxes, such as the 6-MAX model, integrate advanced technology for enhanced safety and efficiency:...
