

Where is the distribution box connected

AI Overview

A distribution box should be connected to the main power supply at a dry, accessible, and ventilated location, with incoming live, neutral, and ground wires properly attached to the corresponding terminals.

Placement of the Distribution Box

The distribution box should be installed in a dry, well-ventilated, and easily accessible area, typically at a height of around 1.5 meters for residential or commercial use . Avoid locations prone to moisture, dust, or extreme temperatures. For outdoor or industrial environments, choose a box with a higher IP or NEMA rating to ensure protection against water and dust .

Connection to the Main Power

- Turn off the main power before starting any installation to prevent electrical shock .
- Secure the box to a wall or mounting surface, ensuring it is stable and free from obstructions .
- Connect the incoming wires from the main supply:
- Live (phase) wire to the main terminal (usually brown or red)
- Neutral wire to the neutral terminal
- Ground wire to the grounding terminal

Wiring the Circuits

- Install circuit breakers in the appropriate slots within the distribution box .
- Connect each outgoing circuit wire to its corresponding breaker, ensuring correct...
