

Where to plug in the RGB splitter

Overview

Just take the RGB splitter that came with your case and plug the 3-pin connector to your MoBo's 3-pin ARGB header, named D_LED1 and D_LED2. Right?

Well, the truth is, while a splitter can be used, its safe deployment hinges on a thorough understanding of electrical principles and. Hello, So I've got and B450 Aorus Elite V2 Mobo and SilentiumPC SG1V EVO TG ARGB case, i wanted to plug in the RGB which I was kinda excited about and i was wondering how to plug it in ?

My Mobo has only header like VD_G and my cable is VDG, without the missing pin, if i plug only the VD it is so. An RGB header on a motherboard is a dedicated connector that powers and controls LED lighting on PC components, available as a 4-pin 12V standard RGB header or a 3-pin 5V ARGB addressable header. What Is an RGB Header on a Motherboard?

What is the RGB header on the motherboard for?

How do I find. In this video, we'll cover things to know when using ARGB and RGB cables, adapters and splitters. These standardized connectors are used by all motherboard manufacturers and EK has chosen to follow the standards with D-RGB products, as well as splitter cables. In this article, we'll detail the.
