

Which stainless steel cable tray support arm is the best

AI Overview

For stainless steel cable tray installations, support arms made of AISI Type 304 or 316 stainless steel are recommended, with Type 316 preferred for highly corrosive environments.

Material Selection

Stainless steel support arms should be constructed from AISI Type 304 or 316 stainless steel, with Type 316 offering superior corrosion resistance in marine, chemical, or highly humid environments . All hardware, including bolts, nuts, and washers, should also be Type 316 stainless steel to ensure uniform corrosion protection .

Design and Load Considerations

Support arms must be capable of handling the uniformly distributed load of the cable tray as well as any concentrated loads, typically tested to support at least 200 lbs at mid-span with a safety factor of 1.5 . The arm design should allow secure attachment to ceilings, walls, or steel structures, and maintain proper tray alignment and spacing .

Compliance with Standards

Ensure that the support arm and cable tray system comply with IEC 61537 or DIN E...
