

Which type of router should I buy for fiber optic internet

AI Overview

For fiber optic internet, choose a high-performance router with Wi-Fi 6, 6E, or Wi-Fi 7 support, multi-gig Ethernet ports, and strong coverage to fully utilize your connection.

Key Considerations

1. Wi-Fi Standard: Fiber internet can deliver speeds of 1 Gbps or higher, so a router with Wi-Fi 6, 6E, or Wi-Fi 7 is recommended. Wi-Fi 7 routers, like the NETGEAR Nighthawk RS700S, offer the fastest wireless speeds and are ideal for gaming, streaming, and multiple devices . 2. Speed and Multi-Gig Support: Ensure the router supports multi-gig speeds to match your fiber plan. Look for routers with 2.5G or 10G LAN/WAN ports and LAN aggregation features to combine ports for faster wired connections . 3. Coverage and Range: Select a router that covers your home size. For large or multi-floor homes, mesh systems or routers with multiple internal/external antennas are ideal. Wi-Fi 7 routers can cover up to 3,500 sq. ft., while mesh systems like Linksys Velop AX4200 eliminate dead zones . 4. Number of Devices: If you have many connected devices, choose routers with MU-MIMO and OFDMA support to handle simultaneous connections efficiently . 5. Security Features: Prioritize routers with WPA3 encryption, automatic firmware updates, and built-in firewalls. Some models include subscriptions for enhanced protection against malware and hackers . 6. Wired Connectivity: For devices requiring stable connections, ensure the router has at least 4 Ethernet ports, preferably with multi-gig support for high-speed wired connections
