

Why is the pigtail fiber FC called a round head

Overview

The tip is then typically polished to produce a rounded surface, called "physical contact" polish. This surface profile means that when the fibers are mated they touch only at their cores, allowing transmission with low loss. The FC connector is a fiber-optic connector with a threaded body, which was designed for use in high-vibration environments. FC connectors are used in datacom, telecommunications, measurement. Round-head fiber optic jumper FC/PC It can be judged that it is a single-mode fiber jumper by the yellow color, and it is known by the connector that it is a round-head fiber jumper FC/PC. The following is a small-square-head fiber optic jumper LC/PC. Small-square-head LC/PC You can see the. The SC was developed by the laboratories at Nippon Telegraph and Telephone (NTT) in the mid-'80s, and was one of the first connectors to hit the market following the advent of ceramic ferrules. A fiber pigtail is single, short, usually.
