

Wiring details for the distribution box

AI Overview

A distribution box safely distributes incoming power to multiple circuits using MCBs, RCCBs, neutral and earth links, with proper wiring and protective devices.

Components of a Distribution Box

A typical distribution box includes:

- Main MCB (Double Pole): Acts as the main switch, handling the full incoming load (commonly 63A for domestic setups) and connecting the phase and neutral from the main supply .
- Single-Pole MCBs: Protect individual output circuits for lighting, outlets, or appliances .
- RCCB (Residual Current Circuit Breaker): Provides protection against leakage currents, electrical shocks, and insulation faults, usually rated at 30mA for domestic use .
- Neutral Link: Distributes neutral to all output circuits .
- Earth Link: Connects the supply and load earthing for safety .
- Busbars and Terminal Blocks: Facilitate organized connections and secure wiring .

Wiring Procedure

- Power Off: Ensure the main supply is completely turned off before starting any wiring .
- Mounting: Secure the distribution box at an accessible height (typically ~1.5m) in a dry, ventilated area .
- Main Connection: Connect the incoming live (phase) and neutral wires to the inpu...
