

# Wiring process for photovoltaic combiner boxes

## AI Overview

A PV combiner box wires multiple solar panel strings through individual fuses or breakers to a common busbar, with proper grounding and surge protection, before connecting to the inverter.

### Overview

A photovoltaic combiner box consolidates the outputs of multiple solar panel strings into a single DC output for the inverter, simplifying wiring, enhancing safety, and providing overcurrent and surge protection . Each string connects to the combiner box via dedicated input terminals, typically through DC fuses or miniature circuit breakers, which isolate individual strings in case of faults .

### Wiring Steps

- String Connections
  - Connect the positive (+) conductor from each solar string to the line side of its respective fuse or breaker.
  - Connect the load side of the fuse or breaker to the positive busbar inside the combiner box.
  - Connect all negative (-) conductors directly to the negative busbar without fusing, following NEC 690.9(B) guidelines .
- Busbar and Output Wiring
  - The positive and negative busbars combine the strings into a single output....
