

XinCe OFW Optical Power Meter

AI Overview

XinCe optical power meters are high-precision, industrial-grade devices designed for reliable fiber optic measurements, offering robust features and versatile applications.

Key Features and Performance

XinCe optical power meters, such as the APM100PON, AOP100T-C, and BPM-100NT, are engineered for high-precision optical power and attenuation measurements in fiber optic networks. The APM100PON model supports simultaneous measurement of 1490nm and 1577nm downstream wavelengths, making it suitable for XG/XGS-PON networks. It features a 2.5-inch large display, IP54 dust and water resistance, and a Type-C rechargeable battery, combining durability with portability. The AOP100T-C and BPM-100NT models are designed for industrial and network measurement applications, providing accurate readings and reliable performance across a wide range of fiber optic systems. These meters are compatible with multiple wavelengths and are calibrated for precise optical power detection, which is essential for maintaining network integrity and troubleshooting fiber links.

Usability and Design

XinCe meters are user-friendly, with intuitive interfaces and clear displays. The APM100PON, for example, integrates a line-to-line testing capability, allowing telecom engineers to perform comprehensive diagnostics in a single device. The devices are also rugged and portable, suitable for fieldwork in industrial or telecom environments. Some models have won design awards, reflecting both aesthetic and functional quality
